

- Is a business application platform for creating native CPU and GPU powered applications
- Makes it easy to rapidly build visually engaging and data rich HD and 3D applications
- Uses lightweight GUI controls on top of a cross-platform abstraction
- Applications use a single source code base to natively target the Mac OS X, Win32, and Win64 platforms

This schematic shows major groupings in the FireMonkey object hierarchy.  
There is a lot more to FireMonkey
